If you have any problems with the registration process or your account login, please contact support. It has been freezing up like every three days or so. The whole compressor and evaporator was just iced up man. So I went and tested some things, then went outside to manually turn on the defrost. Open the panel and started to turn the knob around and let it click in, but the compressor and outside fans were still running, so I let the knob click out and it still running. So I tried all four times modes and it won't even start the defrost mode. We have a heatcraft unit. Did anyone ever have this happen to them. The model number of the timer is 814520B, but I see on the net that there are more 814520 models than the B. What is the difference between 814520 and 814520B. I also checked the thermostat inside the walk-in unit and seems to be working. Don't know the difference between the 20 and the 20B. <http://mzd.cieszyn.pl/userfiles/caldicott-guardian-manual-2006.xml>

- **8145-20b manual, 8145-20 manual, 1.0, 8145-20b manual, 8145-20 manual.**

Termination solenoid connection on the 20B maybe The unit should pump down and the heaters should come on. If you have a aux contacts on the contactor, when the compressor contactor is de energized, then your heater contactor will energize. If this happens then check or replace the 3 wire control in the evap coil. If it goes to the liquid line solenoid valve, it's a pumpdown system. Here's a tip on checking defrost clocks. If you suspect a clock problem, before you touch anything put a reference mark on the dial and go have a smoke. If the dial moves, the clock motor is good. This is especially helpful if you see the clock looks like it's just ready to initiate a defrost cycle. The clock may be stalled due to mechanical wear. If it goes to the liquid line solenoid valve, it's a pumpdown system. The clock may be stalled due to mechanical wear. If it doesn't do that, just replace it. I think it does have a liquid line solenoid valve since I see this in the diagram, but it was located in the evaporator. Disconnecting the X at the timer, would that shut off the timer motor. What is a 3 wire control in the evaporator. The only thing that I can see is that there is a some kind of temperature control switch at one of the coils, which is to cut off the fans when the temp gets too cold froze up and then it turns power on to the X of the timer or something like this. You have to turn them pretty slow when you get close to the trip point. Paragons are out of the defrost timer business since Invensys bought them. Prices aren't competitive. I got my last one from defrosttimer.com I think. Go to your local supply house. It also terminates defrost when the switch senses a set temperature Two Is that I found one brand new on ebay for around 60 bucks. Yes, I am an ebay freak! LOL. We own about 6 BK stores all over northwest of NC, but we also own Bojangles as well. <http://www.lartdelosier.fr/userfiles/caldina-gtt-repair-manual.xml>

Oh, thanks for explaining about the three wire switch yotaman16, so you saying after a defrost has

happen, the fan wont come on til so many seconds to allow the moisture on the evap to refreeze so that it wont blow into the box when the fan kicks back on. I noticed that the other day that the fan didnt kick it right away on the other store and i saw fog coming out of the evap. I was thinking that didnt look good LOL. It finally turned on and started to spin. So it also stops the defrost mode if it rise at the temp that it is set for. May I may what that temp is on most switchesTwo Is that I found one brand new on ebay for around 60 bucks. May I may what that temp is on most switches I carry 2 of those on my truck and can change anything, fits in alll the old boxes and havent had ant problems with any of them yet. Let him try and figure out the diagram on that one, or you can tell him wire for wire what goes ware. I bet the 914520 is alot more money, dont know if he wants to pay that much LOL.Post Them Here All rights reserved. The item includes accessories found with the original product and may include a warranty. See the sellers listing for full details and description. New used or powered. ". I know voltage is the same. Will the 8045 20 work. What is the difference betweentime out and temperature out. If the 8045 20 will. I cant seem to find a wiring diagram on how to wire this correctly Link below has wiring diagram s and wiring manuals for 240V. Clock motor is 240V. You need a transformer to convert 3phase to single phase 240V to operate timer. Then timer outputs can control 3phase power using 3 I doubt you will be able to find a 3 phase type timer. I would suggest you use this timer as a control

and purchase either contactors or relays. I want to control the defrost cycle of the walk in freezer that is downstairs. The rooftop unit has power going to it already. The freezer was installed for future use, now they. Our payment security system encrypts your information during transmission.
