All iPods have five buttons and the later generations 4th and above have the buttons integrated into the click wheel — a design which gives an uncluttered, minimalist interface, though the circuitry contains multiple momentary button switches. The buttons are An additional NOR flash ROM chip either 1 MB or 512 KB contains a bootloader program that tells the device to load its OS from the storage medium. Each iPod also has 32 MB of RAM, although the 60GB and 80GB fifth generation, and the sixth generation models have 64 MB. A portion of the RAM is used to hold the iPod OS loaded from firmware, but the majority of it serves to cache songs from the storage medium. For example, an iPod could spin its hard disk up once and copy approximately 30 MB of upcoming songs into RAM, thus saving power by not requiring the drive to spin up for each song. Custom firmware has also been developed such as Rockbox up to 6G 6G requires emCORE and iPodLinux up to 5G which offer opensource alternatives to the standard firmware and operating system. <https://www.debbiesdance.com/usercontent/file/comdial-impact-8024s-gt-manual.xml>

A firmware update released in September 2006 brought some extra features to fifth generation iPods including adjustable screen brightness, gapless playback, and downloadable games. They went on sale on November 10, 2001. The iPod had a rated battery life of ten hours. VCard compatibility was added, as well as allowing iPods to display business card information synced from a Mac. Using a similar body style as the first generation, the top of the iPod was redesigned, switching from a single swooping cutout in the backplate to mount the FireWire port, hold switch and headphone assembly, to individual ports being cut into the backplate to allow these ports to be accessed. Furthermore, the hold switch was redesigned, a cover was added to the FireWire port, and the mechanical wheel was replaced with a touch sensitive wheel. These versions came with a 4pin to 6pin FireWire adapter and were bundled with Musicmatch Jukebox. At that time iTunes was Mac only and unavailable for Windows. Thinner than the previous models, the third generation models replaced the FireWire port with a new Dock Connector and introduced the Touch Wheel, a completely nonmechanical interface with the four auxiliary buttons located in a row between the screen and the touch wheel. The front plate had rounded edges, and the rear casing was slightly rounded as well. A new wired remote connector was introduced. Whereas first and second generation iPods had an auxiliary ring around the headphone port for the remote, the third generation iPods had a 4pin jack adjacent to the headphone port. All iPods were now compatible with Mac and Windows out of the box, simply

requiring Windows users to reformat the iPod before use on a PC and both iTunes and Musicmatch Jukebox were bundled with all iPods. The battery life was reduced to 8 hours, partially due to the use of a lithium ion battery as opposed to a lithium polymer battery. The Windows-based Musicmatch Jukebox software was made obsolete and replaced by iTunes

1, the first version available for Microsoft Windows. The casing was also slightly slimmer. Notably, Apple began reducing packed accessories starting with the fourth generation. While a dock, carrying case, and wired remote were previously included with higher-end iPods, the higher-level 40GB iPod only came with a dock, earphones and an interchangeable proprietary cable capable of USB and FireWire interface. In addition to using the iPod Mini's Click Wheel, the fourth-generation iPod used the more energy-efficient components of the Mini, allowing the fourth-generation iPod to over 12 hours of battery life while using the same battery as its predecessor. The plastic front piece of the U2 edition iPod was black and the scroll wheel was red, to coincide with the color scheme of the U2 album. U2 iPod customers also received 30 minutes of exclusive U2 video downloadable from the iTunes Music Store. It was the first iPod to be able to play videos. The 4-pin remote port was removed as well, causing backwards compatibility issues with certain accessories. The fifth-generation iPod was the last model to have a plastic face. Video such as TV shows, podcasts, music videos, and movies may be purchased from online stores such as the iTunes Store, or downloaded from Google Video and other sources, then imported to the iPod via iTunes software. An iTunes installation CD was also no longer bundled, requiring users to download iTunes from Apple's website. Gapless playback and support for iPod games was enabled on all fifth-generation iPods through a firmware update released at the same time. This marks the first time white is not available as a color option for an iPod. The sixth-generation iPod also introduced a completely overhauled user interface, incorporating more graphics and Cover Flow. Please help improve this article by adding citations to reliable sources.
