To safeguard our data privacy, we might have stored your photos in some private storage like Private Photo Vault, but are unable to find them due to a system crash, or accidental deletion of either data or app. Then, we endeavor to try every possible way to retrieve them from the Private Photo Vault. There are multiple ways to restore lost Android photos and videos, but only a few yields positive outcomes and successfully recover hidden photos in vault apps. Before we move to those methods, let's first discuss what Private Photo Vault is and how it works! Table of Contents What is Private Photo Vault? Private Photo Vault is one of the highest-rated photo privacy applications where users can keep their photos and videos in one place, completely secure from all the snoopers. Unmatched privacy and multi-platform compatibility make it be selected by numerous Android users. Can I restore photos and videos hidden in the Private Photo Vault? Yes, you can get back hidden photos and videos from the Private Photo Vault. The application allows both Android and iPhone users to transfer media from the local gallery or album and will remove those files from local storage. To access those hidden photos and videos from the app: 1. Open the Private Photo Vault and enter the passcode or slide the pattern you set before. Then the media saved there will be presented. 2. Tap desired images or videos and save them on your Android. 3. After that, you'll find those hidden files are saved in the vault app and phone simultaneously. If you delete media from the app, though there's a trash folder in the app, you'll find that you cannot restore them from the folder directly. Is it possible to recover deleted photos and videos from Private Photo Vault? Let's sneak over its short and crisp answer. How to recover deleted photos and videos in the Private Photo Vault? You may learn from some articles said that you can get back data from vault apps via ES File Explorer File Manager by finding the target hidden folder. It doesn't work for all. Private Photo Vault is trusted by users for its high-security guarantee. It focuses more on users' data privacy and doesn't allow people to hack the hidden data from the file manager according to its policies. In case you've deleted your files, or the above-given procedure hasn't yielded any fruitful outcomes for you, don't worry! The steps below will assist you in recovering pictures and videos from the Photo Vault. Private Photo Vault offers the premium feature Cloud Vault as an official cloud service for users to back up and recover files in case there's a data loss. For those who have purchased and signed up for Cloud Vault, the recovery process would be easy. To enable Cloud Vault: Open the Private Photo Vault application and go to settings. Touch the 'Cloud Vault' tab to create an account on it by tapping "Sign Up". During account creation, always ensure to use an active email. Save your password at some secure place as this password is non-recoverable at any cost. After creating the Cloud Vault account, it will upload all your data safely to the cloud server. When unintentionally deleting data in the application, you can go to the Recently Deleted folder to undelete those media within 30 days. After 30 days, or if you uninstall the application or factory reset your phone, just sign in with your Cloud Vault account, and re-download them from the backup in cloud storage. While for iPhone users, apart from recovering wiped data from cloud service, you can also back up and restore them in Private Photo Vault via iCloud or iTunes, which will keep your Private data for a longer time for free. Bonus tip: Recover photos and videos without backup in an unfortunate event where you haven't stored your data in cloud storage of Photo Vault or backed up them, Android Data Recovery can offer you great help to get back lost photos and videos. Android Data Recovery, an all-in-one recovery tool launched by AppGeeker, works on both Mac and Windows. It couldn't bypass the lock of Photo Vault but is available to give a thorough scan of your device to find the trace of those previous photos and videos on your phone's internal storage and recover them. On top of that, the data restoration process is straightforward. Let's delve into the details on way to retrieve deleted images and videos from the Private Photo Vault on Android using the tool. for MacOS [ for Windows Download the latest version of the recovery tool according to your operating system. After installing and opening the software, follow this simple guide: Connect the device with computer Click the 'Android Data Recovery' module and connect your android device with the PC using the USB cable. This will give your PC access to your Android smartphone. Before moving any further, always check you have enabled the USB Debugging. You can turn it on from the Developer Options in the mobile settings. If developer options aren't visible, then go to 'About Phone' and tap the 'Build Number' seven times. Scan the smartphone Tick the checkboxes of Videos and Photos from the software window. If you want to recover some other types of data, feel free to tick them as well. Once done, click the scan button. All scanned data will be presented on the screen during the scanning process. Root for deep scan If there's no data you need, a pop-up will appear asking to root your device for the in-depth scan. Follow the on-screen instructions to root your phone. Don't worry about data security and privacy since you can unroot your device after recovery. Recover lost photos and videos After that, just preview them, hit the recover button, and guide these files to your desired location. Later, paste those recovered data to your phone, and all erased media from Private Photo Vault are back in the phone gallery. FAQs Can I back up photos and videos from Private Photo Vault to Google Drive? Currently, Private Photo Vault hasn't offered any such features for Android users. You can only backup via the 'Cloud Vault' build-in in the Private Photo application. iOS users can backup files into iTunes and iCloud storage. Can I recover my Private Photo Vault password? When you first open the app on your mobile phone, a pop-up appears on the screen asking for a recovery email. If you've entered your recovery email at that time, then you can easily retrieve both App and Album's Password. However, the 'Cloud Vault' password can never be recovered for security reasons. Wrapping up Various vault apps enable users to hide private photos and videos. However, they are vulnerable to being deleted. With the full guide we said above, users can easily get these files back. Plus, using Android Data Recovery helps recover them even if there's no backup. Have a free trial here to check if your deleted files can be recovered from the Private Photo Vault. Google Photos is an extremely helpful app to keep your photos and videos organised, particularly for Android users. Google Photos is Android's official gallery app and it allows users to view, edit, and backup photos and videos on Google Cloud. The app has also been recently updated to bring in a locked folder feature that will allow users to keep some content private. Very often we share photos with friends and family and at times they also might be looking through the gallery where you might have content you don't want others to see. This is where the locked folder will come in handy. A locked folder will allow you to store content and keep it away from the main gallery so as no one can access it. So how does the locked folder in Google Photos work? It's pretty simple, actually. This is a folder where you can add photos and videos you want to keep private. Google Photos uses your device's screen lock password to safeguard this folder and it could be your fingerprint or PIN. The items in the locked folder will not show up on your photo grid, memories, or other albums and they will also not be accessible to other apps on your device even if they have access to photos and videos. Just a note though, this locked feature on Google Photos is not available on iOS yet. How to create this locked folder on Google Photos? 1. Head over to the Play Store and ensure that your Google Photos is updated. 2. Next, open up Google Photos and click on the 'Library' icon on the bottom right corner of the screen. 3. Once the Library section opens up, click on the 'Utilities' tab which will be right on top of the screen. 4. Under the Utilities section, you will be able to see a 'Set up Locked Folder' option and the description tells you that it is for hiding sensitive photos and videos. 5. Click on the 'Get started' option and you will be routed through some locked folder guidelines. 6. Tap on the 'Set up' button on the bottom right corner of the screen. 7. Set your screen lock. 8. Next, tap on the 'Move items' button to add pics and videos to the locked folder. 9. This brings you to your photo gallery and you can start selecting the content you want to move to the locked folder. 10. Once you are done selecting, tap on 'Move'. End note The locked folder feature is only available on Android devices for now and you have to be on Android 6 or higher. Copies and edits of content in the locked folder will not automatically be moved to the locked folder, you have to add them manually. If you are deleting Google Photos, these items will be deleted.
